Worldline MultiLine Host2Host Solution

Powered by Isabel Group Belgium

Exchange payment and reporting files automatically and gain efficiency across your financial value chain.

An update to existing IT architecture and the prioritisation of automation can consolidate fragmented application landscapes, provide better cash visibility and optimisation and mitigate risks.

When looking at the critical processing around financial data and reporting, financial institutions can benefit from Worldline's automated MultiLine Host2Host solution and help secure their future operations while gaining efficiency.

Working with banks on large digitalisation transformation programs, we recognize the following key challenges in financial data processing and reporting:

Highly manual processes that are dependent on manual intervention leads to an enhanced risk of errors or delays.

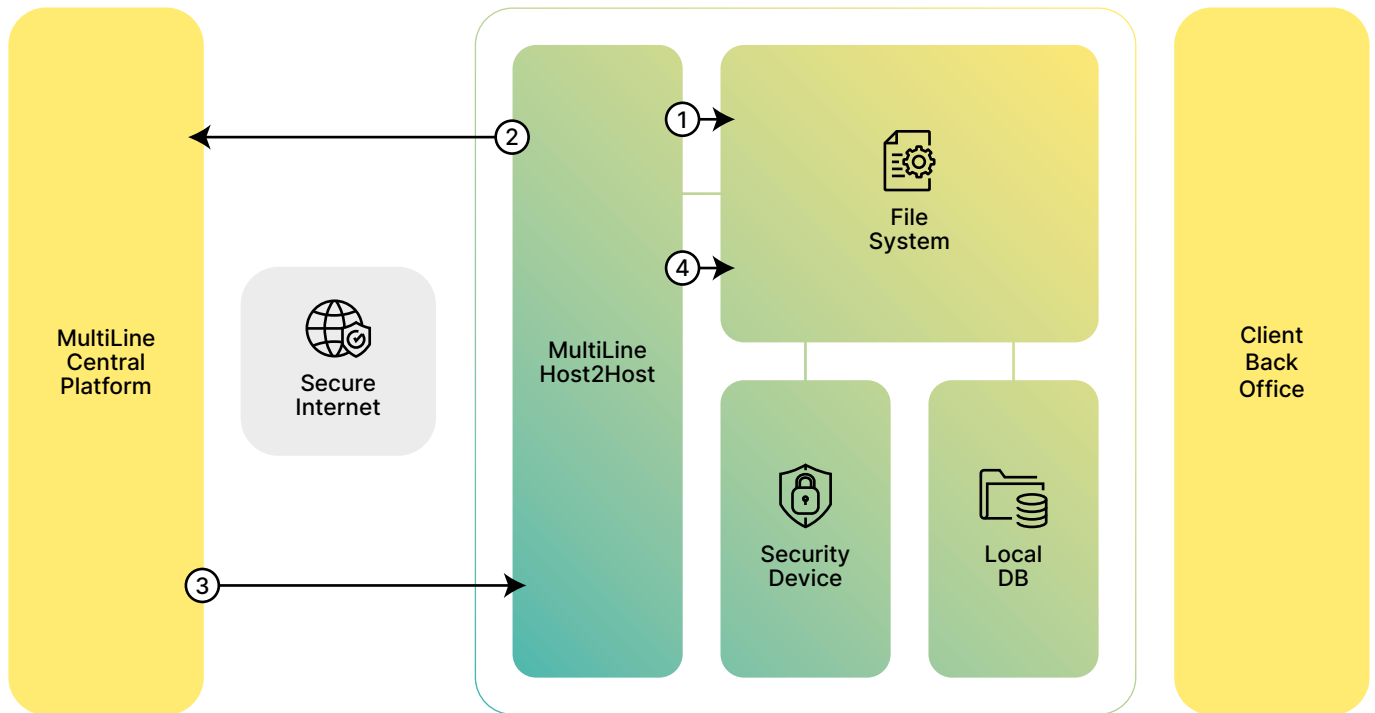

Larger risk of security breaches and fraud based on the sensitive information going through multiple manual processes.

Lack of efficiency costs additional time that must be allocated, adding to the significant resource challenge within the industry.

With MultiLine Host2Host solution, you can reap the benefit of complete automation of the full file exchange. We support large volumes with our scalable solution. With the comprehensive automation our solution provides, a higher security standard is promised.

MultiLine Host2Host Solution

The MultiLine H2H polls the directory structure for payment documents that the users have placed in the output directory.

The MultiLine H2H sends the documents to MultiLine Central Platform. The MultiLine Central Platform sends response files and statistics to the MultiLine H2H.

The MultiLine H2H distributes the reporting files within the input directory and statistics in the directory structure.

Your trusted partner in payments

#1

European payment processor

126 M+

cards under management

12.5 BN

issuing processing transactions per year

13.1 BN

Acquiring processing transactions per year

23.0 BN

account payments transactions per year

Key benefits of our solution:

- The MultiLine H2H supports the file types and banks known in MultiLine. The files are retrieved and processed at the time you decide, providing you more accurate quality data.
- Our open architecture solution can easily integrate with your applications as well as proprietary software, ensuring fast onboarding.
- Large files are processed fast, and manual intervention is no longer required, allowing you to better allocate resources.
- One license for upload/download functions for all MultiLine banks.
